For Immediate Release:

Potentiometer Available In Over 200 Configurations

Southborough, MA – With a substantial selection of shafts, housings, bushings, bearings, and other components that can be mixed and matched, the Novotechnik PL300/310 series of high-precision miniature potentiometers can be configured to customer specifications.

The PL 300/310 series is manufactured by Novotechnik in Biel, Switzerland, where workers specialize in precision and miniaturization. Built with precious metal multi-finger wipers, gold-plated solder pins and stainless steel shafts, PL300/310 potentiometers measure 22.2 mm in diameter while providing outstanding repeatability – to better than 0.1° – together with linearity to $\pm 0.25\%$ over a life of 10^6 movements.

Mechanical travel is 360° continuous and electrical range is 340° or 348° . PL 300/310 series offers bushing or servo mount packages. Electrical range and mounting depend on model selected.

The PL 300/310 series is designed for valve and throttle control, servo systems and other measuring applications that require high reliability and precision in the smallest possible package.
