1. Safety notes

1.1 Installation and startup
The rotary transducer must be installed by qualified personnel in consideration of all relevant safety regulations. In case of unauthorized modifications, non-permitted usage or non-observance of installation instructions, the warranty and liability claims will be lost. All personal protection measures in case of a transducer defect or failure must be taken before startup.

1.2 Electrical connections
The specified supply voltage is to be applied only at the terminals provided. Non-observance of the pin configuration will result in destruction of the device and loss of warranty.

Please always check the connections carefully before turning on the system.

2. Installation

2.1 Terminal diagram

2.2 Output Signal

Voltage divider free of load!
Wiper current
$I_e \leq 1 \mu A$

Values are valid for an applied supply voltage of 5V

SP 5001 Instructions for Use

4. Installation Instructions:
   Pay attention to the maximum tightening torque of 2.5 Nm when fastening the mounting screws on the flange of the device. Because of the brass bushings, washers are not required.

   To ensure proper sealing, before installation of the sensor the presence and proper location of sealing ring has to be checked. After disassembly of the sensor the o-ring must be replaced, otherwise the sealing function can not be guaranteed.

5. Dimensions

   Pay attention to the maximum tightening torque of 2.5 Nm when fastening the mounting screws on the flange of the device. Because of the brass bushings, washers are not required.

6. Mounting Interface:

Z000-2242
